Compile Commands

Some compile extensions located in my site-specific *Emacs* configuration file:

- compile history (F7):

```
    (setq compile-history
          (list "make -C <dir1> ..."
                "make -C <dir2> ..."))

    (setq compile-command (car compile-history))
```

- additional compile command (C-S-F7):

```
    (defvar compile-history-2
      (list "make -C <dir1> ..."
            "make -C <dir2> ...")
      "compilation history for command `compile-custom-2'")

    (defun compile-custom-2 ()
      "Run a make (compile)"
      (interactive)
      (let* ((cmd compile-command)
             (hist compile-history)
             (compile-history compile-history-2)
             (compile-command (car compile-history-2)))
      (call-interactively 'compile)
      (setq compile-command cmd               ;restore original compile
command
            compile-history-2 compile-history ;save current history
            compile-history hist)))           ;restore original history
```
