CentOS 6.5 on DELL Latitude E5400

Samba

Acess to my *Samba* share at `/home/share` was denied by *SELinux*. Therefore i added the following line to file `/etc/selinux/targeted/contexts/files/file_contexts.local`:[1)]

```
/home/share(/.*)?    system_u:object_r:samba_share_t:s0
```

Eclipse

CDT did not work after installing *Eclipse*. But a workaround exist by installing `eclipse-pde` (Eclipse Plugin Development Environment).

```
yum install eclipse-pde
```

PC/SC

For the german electronic tax declaration system Elster the following *CentOS* packages were too old: `pcsc-lite-*` and `ccid-*`. So i did download `ccid-1.4.12` and `pcsc-lite-1.8.8` from the project homepage. Configuration and build was performed the standard way:

```
.../pcsc-lite-1.8.8 > ./configure; make; make install
.../ccid-1.4.12 > ./configure --enable-udev PCSC_CFLAGS=-
I/usr/local/include/PCSC PKG_CONFIG_PATH=/usr/local/lib/pkgconfig; make;
make install
```

I then disabled any package update by inserting the following line in `/etc/yum.conf`:

```
exclude=pcsc-lite-* ccid-*
```

and modified `/etc/init.d/pcscd` to reflect the installation directory `/usr/local/sbin`.

1)
Idea based on a *Scientific Linux* mail archive message and the webpage http://selinuxproject.org/page/AdminDocs.
